General

Nonni travels without own technician.

If possible, all microphones and a standard drum set (excluding snare drum and cymbals) should be provided by the event organizer. If necessary, the band can supply certain equipment as specified in the detailed equipment list.

The band uses its own In-Ear Monitoring (IEM) system, which is provided and set up by the band. All input signals related to the band must be routed through this system. The IEM setup includes output connections via XLR to route the signals back to the venues sound system.

Monitoring

The band uses a wireless IEM system, which is provided and set up by the band. No on-stage monitors are required.
