

# KARMA ADDON

## TECHNICAL RIDER

### Stage Plan

### Notes

- The technical rider is part of the contract.
- We need 7x 230V/50Hz-powerstrips (3 connections per powerstrip). 3x on front for our floorboards and 4x on back for amplifiers
- Drummer needs 1x 6,3mm mono-jack for headphone-amp as monitoring near his seat
- (Optional:) Drummer has a Sample-Pad with 2x 6,3mm mono-jacks as output
- Please make sure that the guitar-cabinets are placed upon some kind of cases – beer-cases, rack cases, anything that is stable enough to carry about 50+ kg and does not have any rolls. If full-stacks are used, this point can be ignored.
- The PA-system should be sized for the event and the amount of audience and capable to transfer loud rock-music. Please no DIY-systems!
